

Open Position at Allevetix Medical: System Engineer \ project manager

The company is based in Caesarea and is developing a treatment for diabetes.

As part of an effort to extend our R&D department, we are looking for an organized person to get us organized 😊

The ideal candidate should be creative and proactive, to work successfully in a fast-paced. The individual will work closely with the team throughout the development stages.

What you will do day-to-day

- Develop, maintain, and execute plans, milestones, schedules, and task lists.
- Manage and logically organize data to identify and describe problems.
- Hands-on: integration, push forward verification and validation testing, documents, and kind of special missions.
- Lead and manage product reviews.

What you will need to be successful in this role:

- Bachelor or master's degree with three years of experience.
- Strong interpersonal and communication skills
- Ability to work in a team effectively.
- Fast learner and autodidact.
- Ability to make and communicate decisions in a timely fashion; to formulate and execute a course of action.
- Ability to independently manage and prioritize work based on goals and objectives and provide deliverables in alignment with timelines.
- Excellent written & verbal English communication skills.

How to apply:

send your CV to info@allevetix-medical.com
with full name and the position at the subject.
