

If you

- have a background in **molecular biology** and **biochemistry**
- have some notion of **crystallographic** methods
- are not afraid of getting your hands dirty with **lab work**
- are curious about the **origin of structure** in the molecular fabric of life

then this ad is probably for you

**WANTED** (preferably alive)

An **M.Sc.** or a **Ph.D. student** for an inter-disciplinary research team of biologists and computer scientists studying the formation of structure in proteins using data-driven methods.
