Inbound Product Manager

Zebra has set out on a mission to help hundreds of millions of people receive access to fast, accurate medical diagnosis, by teaching computers to read and diagnose medical imaging data. Zebra Medical vision is revolutionizing healthcare by creating an AI-based radiologist. Our product is a scalable analytic engine, which uses deep learning algorithms to detect anomalies in medical images, at global scale.

We are looking for an Inbound Product Manager who is a leader, detail oriented with an innovative vision who can connect the pieces of the puzzle with a "can do" approach. You hold great communication, presentation, and leadership skills, you are independent, and have the ability to take ownership of activities from initiation to completion.

Responsibilities:

- Translate product strategy into detailed requirements
- Manage all lifecycle stages for a product under QMS
- Lead research/clinical/data scrum team as a Scrum Master, to deliver with optimal time-to-market, quality, and resources
- Scope and prioritize activities based on business and customer impact
- Collect and analyze feedback from customers, support, and other stakeholders to shape requirements
- Serve as an in-house expert for our product and become the go-to person for all functional issues.

Requirements:

- You have previous working experience as a Product Manager in the Medical field for at least 3 years (at least 80% Inbound).
- Experience in leading a software product life-cycle from planning to delivery with a mix of technical (product management; engineering) and business (consulting, product marketing) and regulatory background
- You have a proven track record of managing all aspects of a successful product, throughout its full life cycle.
- You are familiar with AI, Machine Learning & Deep Learning concepts - an advantage
- Outstanding written and verbal communication (mainly English), as well as interpersonal skills
- High capacity and care for the fine details while overseeing the business goals
- Education in the areas of Medical / Clinical / Engineering / Business / Bioinformatics / Medical Informatics
- Willing and able to work in a fast-moving startup environment
