

## In a search for new targets?

We are looking for a Senior lab manager ( Ph.D. degree/Post-doc) to join a young, vibrating, and well-funded research team in Rambam (CRIR) that studies the entire spectrum of pancreatic cancer development, from Acinar-to-Ductal Metaplasia up to liver metastasis evolution; focuses on the major challenges of the disease, such as early detection and response to therapy; and engaged in all research aspect, from bench work, through device development, to clinical trials.

We are interested in an outstanding scientist with a strong background in molecular biology and mice work. Experience with immunity/metabolism methods and bioinformatics is preferred, but more important are vision, enthusiasm, and the ability to collaborate.

Might be interested? Please send CV and contact details to Erez Hasnis at:
