Rapid Medical is a medical device company focused on neurovascular devices designed for interventional procedures. The company is based in Yokneam, Israel, and our current commercial portfolio includes devices for treatment of ischemic stroke, intracranial aneurysms and neurovascular navigation tools. Our products are designed and manufactured in Israel, sold and used around the globe, currently focusing on Europe and US territories.

**Junior R&D Engineer (or last-year student)**

We are looking for a mechanical or biomedical engineer to join our R&D and Engineering team in a junior engineer position. The Junior engineer will assist in R&D projects from concept to commercialization. Work scope may include:

- Prototype testing
- Designing jigs and fixtures
- Writing test protocols and reports
- Generate DMR (drawings, routing cards, work instructions, material specifications)
- Perform verification and validation testing (V&V)
- Support transfer to production activities

The candidate should have a mechanical or biomedical background, sharp and enthusiastic about medical devices, good hands and understanding of mechanics, and an endless hunger to evolve and learn.

**Minimum requirements:**

- Mechanical or biomedical engineering degree from a university/Technion
  - last year outstanding students that can commit to 60% part-time may apply as well.
- GPA ≥ 85

**Additional requirements:**

- Team player
- Fast learner
- Good hands (testing, assemblies)
- Organized & methodical
- Responsible, independent, and highly committed
- English – high level
- Familiar with Solidworks – an advantage
Why Rapid Medical?

The right candidate will have the opportunity to enter the medical device industry and join a company that is on a success path with a solid financial back and a portfolio of commercial products. A company that is still small enough and fast with a start-up DNA, with several years of market presence and experience, with the know-how and ability to develop and bring new products and technologies to the market which are innovative and unique. A company that is growing rapidly in the super-interesting field of neuro-interventional procedures and offers the R&D engineer a full cycle experience of life-saving class III devices development-regulation-production-commercialization. So, if you want to see your work saving lives in the hands of physicians and work with great people – come and join us!
