

## Head of Protein Research and Development

דרוש/ה בוגר/ת תואר שני/ שלישי מהפקולטה לביו-רפואה/מדעי החיים

### Job Description

We are looking for a Head of R&D for our young, early-stage life science startup, developing protein-based technology.

Compensation package: Salary and equity-based compensation

Anticipated start: March 2021

### A day in the life of Head of R&D:

- Lead and manage technological development (hands-on involvement required).
- Contribute to the definition and execution of our strategy and priorities.
- Lead, coach, recruit and develop the R&D team.
- Manage the R&D laboratory.
- Develop long-term workplans, and lead their execution to achieve company goals, in alignment with consumer and business needs.
- Drive initiatives and innovative ideas.
- Develop new tools and competencies in our domain.
- Contribute to intellectual property management and communicate results in an effective manner.
- Create strategic alliances and collaborations, identify and oversee R&D-related subcontractors and advanced analysis laboratories.
- Ensure guardianship and dissemination of knowledge in line with the latest innovations in academia and industry.

### What will make you successful

- PhD or MSc with relevant experience in Protein Engineering, Biochemistry, Molecular & Cell Biology or similar field; and leadership experience in a research and development role, with emphasis on protein analytics.
- Strong understanding of protein chemistry.
- Experience in protein expression and purification.
- Experience in R&D, particularly understanding and analysis of intermolecular interactions.

- Comfortable in a fast-paced environment dealing with multiple overlapping projects and time-sensitive workflows.
- Demonstrated ability to evaluate, interpret, and present complex scientific data.
- Good project management and organization skills.
- Strong sense of teamwork and sharing culture.
- Entrepreneurial, proactive mindset.
- Good written and oral skills in English.

Preferred:

- Proven records in developing and executing scientific strategies that can be translated into innovative business applications is desirable.
- Experience in regulatory interactions with health authorities is desirable.
- Experience managing projects and teams highly preferred.
