

Project Manager

Biomedical Startup company is looking for Project Manager

Job Description:

We are looking for a Project Manager, with experience in medical devices, to lead our project management efforts

Lead the project management efforts as part of R&D, including work plans and execution from definitions and requirements through design, implementation, integration and V&V to obtain regulatory clearance and reach product release.

- Ownership of system level project work plans, execution and control, working with the various functions and managers.
- Collaboration with Q&R to implement relevant processes and support for clinical and regulatory efforts.
- Hands on leadership of various operational efforts.
- Work with and monitor external partners and subcontractors.
- Lead transfer to production efforts and field monitoring activities.
- Reporting to: GM of the site in Israel

Education and Experience:

- Engineering degree
- Over 5 years of experience in relevant medical devices companies
- Project management or senior systems engineering experience
- Experience in both startups and large companies – an advantage
- Experience in cardiac devices, blood pressure or digital health - an advantage.
- Proven delivery of results in a medical multi-disciplinary environment.

Qualifications:

- Strong technical leadership.
- Good communication and interpersonal skills.
- Ability to learn quickly
- Hands on approach without losing the big picture.
- Fluent in Hebrew and English
