

OB-Tools is looking for a Senior Product Manager! We are developing a non-invasive maternal & fetal monitoring system to be used by healthcare professionals in a clinical setting.

**As a Senior Product Manager, you will:**

- Define the product roadmap - align it with business goals and user needs.
- Develop a deep understanding of clinical workflows including operator and patient experience aspects. Collect and analyze inputs from the market, operators, customers and patients. Prioritize and translate your findings to product requirements.
- Translate product strategy into detailed SW, HW and Mechanical requirements defining the product functionality and features. Communicate requirements to R&D team.
- Support clinical trial - instruct and train medical staff how to use the product in a clinical setting.
- Present clinical performance of the product using statistical measurements and data visualization techniques to a variety of stakeholders.
- Be responsible for the product user manual and PRDs.

**Requirements:**

- BSc in Bio-Medical Engineering or equivalent.
- 3+ years of product management experience in a company developing a medical device.
- Demonstrated success in defining and launching medical device products.
- Matlab skills and signal processing background – a must;
- Familiarity with C & C# – an advantage;
- Strong communication and collaboration skills.
- Excellent technological and analytical skills.
- Proficient in Hebrew and English (written and verbal).
- Availability – full time position on-site, the company is based in Nesher near Haifa.
- Travel - the position includes working in hospitals in Israel and US, up to 20% travels.
